# NITER

Eng. Nurunnabi
Textile Engineering

#### Bio

Mr. Nurunnabi is an assistant professor in the Department of Textile Engineering at National Institute of Textile Engineering and Research (NITER). With a Master in Science from Bangladesh University of Textiles, Mr. Nurunnabi brings a wealth of academic rigor and expertise to his teaching and research. His scholarly interests lie in agro-waste-based composite materials, nano-composites, and polymers.

### **Education**

Degree Name	Group/Major Subject	Board/Institute	Country	Passing Year
MSc	Textile Engineering	BuTex	Bangladesh	2023
BSc	Textile Engineering	DUET	Bangladesh	2015
Diploma	Textile Engineering	BTEB	Bangladesh	2010
SSC	Science	Dhaka	Bangladesh	2006

# Experience

Job Title	Organization	Location	From Date	To Date	
Lecturer	NITER	Savar	05/06/2016	10/03/2024	
Lecturer	City University	Ashulia	17/05/2015	31/05/2016	

# **Research Activities**

# **Research Interest**

Subject	Description	Research Interest (Goal/ Target Indicator)
Composite Materials utilizing agro waste  Agro-waste-based composites are typically produced by combining the fibers or particles with a polymer matrix, such as epoxy or polyprothrough various processing techniques like compression molding or extractional transfer or particles with a polymer matrix, such as epoxy or polyprothrough various processing techniques like compression molding or extractional transfer or particles with a polymer matrix, such as epoxy or polyprothrough various processing techniques like compression molding or extractional transfer or particles with a polymer matrix, such as epoxy or polyprothrough various processing techniques like compression molding or extractional transfer or particles with a polymer matrix, such as epoxy or polyprothrough various processing techniques like compression molding or extractional transfer or particles with a polymer matrix, such as epoxy or polyprothrough various processing techniques like compression molding or extractional transfer or particles with a polymer matrix, such as epoxy or polyprothrough various processing techniques like compression molding or extractional transfer or particles with a polymer matrix, such as epoxy or polyprothrough various processing techniques like compression molding or extractional transfer or particles with a polymer matrix, such as epoxy or polyprothrough various processing techniques like compression molding or extractional transfer or particles with a polymer matrix, such as epoxy or polyprothrough various processing techniques like compression molding or extractional transfer or particles with a polymer matrix and the procession molding or extraction and		To develop novel composite materials utilizing agro waste as reinforcement fillers, with the overarching objective of achieving enhanced mechanical properties, improved sustainability, and expanded application potential.
Nano composites from natural source	Nanocomposites derived from natural sources represent a groundbreaking approach in materials science, harnessing the unique properties of nanotechnology and renewable resources to create advanced materials with diverse applications. By integrating nanoparticles derived from natural sources into polymer matrices, these nanocomposites offer unparalleled mechanical, thermal, and biological properties while reducing reliance on synthetic materials and minimizing environmental impact.	from natural sources, aiming to harness the unique properties of natural nanoparticles for the creation of advanced materials with enhanced mechanical, thermal, and environmental performance
